

1. **Names:** Store the names of a few of your friends in a array called `names`. Print each person's name by accessing each element in the list, one at a time.
2. **Greetings:** Start with the array you used in Exercise 11, but instead of just printing each person's name, print a message to them. The text of each message should be the same, but each message should be personalized with the person's name.
3. **Your Own Array:** Think of your favorite mode of transportation, such as a motorcycle or a car, and make a list that stores several examples. Use your list to print a series of statements about these items, such as "I would like to own a Honda motorcycle."
4. **Guest List:** If you could invite anyone, living or deceased, to dinner, who would you invite? Make a list that includes at least three people you'd like to invite to dinner. Then use your list to print a message to each person, inviting them to dinner.
5. **Changing Guest List:** You just heard that one of your guests can't make the dinner, so you need to send out a new set of invitations. You'll have to think of someone else to invite.
